WHAT ARE THE BENEFITS OF MULCH?

- Mulch holds in moisture, moderates soil temperature, and prevents roots of plantings from drying out quickly.
- Using mulch around plants can inhibit weed germination and growth.
- Mulch prevents soil splashing, which not only stops erosion but keeps soil-borne diseases from splashing up onto plants.
- When the mulch breaks down, it adds nutrients to the soil. It also encourages earthworms to occupy the area, which promotes healthy soil and a nutrient cycle.
- The application of mulch will provide a beautifully landscaped environment.
