

August 2014

Traffic Mitigation Plan for Bal Harbour Shops Traffic Congestion

ATEC PM: Richard Mitinger, P.E

Client :Bal Harbour Village

Town of Surfside

TECHNICAL MEMORANDUM

Date: August 28, 2014

To: Chief David Allen, Surfside Police Department
Chief Mark Overton, Bal Harbour Police Department

From: Rick Mitinger, P.E., Senior Traffic Engineer, ATEC

CC: Sunil Doddapaneni, P.E., P.T.O.E., Senior Project Manager, ATEC
Carlos Lores, P.E., Signal Systems Engineer, ATEC
Megan Mecham, E.I., Transportation Engineering Analyst, ATEC

Subject: Traffic Mitigation Plan for Bal Harbour Shops Traffic Congestion – Recommendations

1.0 Introduction

The Village of Bal Harbour, located in north Miami-Dade County (MDC), is one of Miami Beach's most prominent destinations for tourism and residential living. Similarly, the Village attracts residents and visitors alike to the Bal Harbour Shops, a mall offering numerous fashionable shopping options. During the weekend and tourism season, roads near the Shops experience heavy traffic congestion. This results in unfavorable delays at intersections accessing the mall.

The Bal Harbour Police Department has retained Advanced Transportation Engineering Consultants, Inc. (ATEC) to perform a qualitative assessment of the signalized intersections near the Shops and develop a traffic mitigation plan to improve signalized operations. This memorandum describes the project background and location, the data collection effort, the traffic analysis effort, and presents the traffic mitigation plan.

1.1 Background

The Bal Harbour Shops are located near the intersection of two Florida state roads: SR-922/96th Street and SR-A1A/Collins Avenue. The Shops are a large traffic generator within Bal Harbour Village, with approximately 450,000 square feet of retail space and approximately 95 luxury retailers and restaurants.

Recently, the Police Department has received complaints regarding the traffic signal operations and overall traffic operations at and near the Bal Harbour Shops entrances. The complaints suggest that updating the signal timing will help alleviate some of the traffic congestion associated with the mall.

1.2 Project Location

The purpose of this project is to reduce delay at intersections near the Bal Harbour Shops. However, adjustments to adjacent signals will require additional adjustments to other signals in the area. Figure 1-1 shows the study area, which extends into the Town of Surfside to the south. The study area includes the following road segments and intersections.

Road Segments

- Collins Avenue from Harbour Way to 90th Street
- Harding Avenue from Collins Avenue to 91st Street
- 96th Street from the southwest exit of the Bal Harbour Shops (500 Block) to Collins Avenue

Intersections

- Collins Avenue& Harbour Way (MDC Asset Number 3629)
- Collins Avenue& 9700 Block (MDC Asset Number 3548)
- Collins Avenue& Harding Avenue (MDC Asset Number 3006)
- Collins Avenue& 96thStreet (MDC Asset Number 3005)
- Harding Avenue& 96thStreet (MDC Asset Number 2919)
- Collins Avenue& 95thStreet (MDC Asset Number 3319)
- Harding Avenue& 95thStreet (MDC Asset Number 2918)
- Collins Avenue& 94thStreet (MDC Asset Number 2912)
- Harding Avenue& 94thStreet (MDC Asset Number 2917)
- Collins Avenue& 93rdStreet (MDC Asset Number 2911)
- Harding Avenue& 93rdStreet (MDC Asset Number 3185)
- Harding Avenue& 91stStreet (MDC Asset Number 2916)
- Collins Avenue& 90thStreet (MDC Asset Number 4231)
- 96thStreet& 500 Block (MDC Asset Number 4344)
- 96thStreet& Byron Avenue (MDC Asset Number 3648)

2.0 Data Collection

Data collection efforts included 72-hour continuous approach counts, 4-hour turning movement counts (TMCs), and signal timing information. Volume and turning movement count locations were selected during a meeting with the Bal Harbour Police Department. Data collection focused on the main ingress and egress routes to the Bal Harbour Shops. Figure 2-1 shows the data collection locations.

The 72-hour volume counts were used to determine two 2-hour peak periods during the weekday – one in the morning (AM) and one in the evening (PM) – and one 4-hour peak period during the weekend. The weekday AM peak period was 7:00 AM to 9:00 AM; the PM peak period was 4:00 PM to 6:00 PM; and the weekend peak period was 3:00 PM to 7:00 PM. TMCs were collected during each of these peak periods. The TMCs were used to determine 1-hour AM, PM, and weekend peak hours to be modeled. The AM peak hour was 8:00 AM to 9:00 AM; the PM peak hour was 5:00 PM to 6:00 PM; and the weekend peak hour was also 5:00 PM to 6:00 PM. Please see Appendix A for the 72-hour volume and 4-hour turning movement counts. Vehicle travel times were also collected in order to calibrate the traffic models. These data will also be used to compare travel times before and after the signal timing changes are implemented.

Existing signal timing parameters were obtained from Miami-Dade County. Please see Appendix B for the signal timing plans.

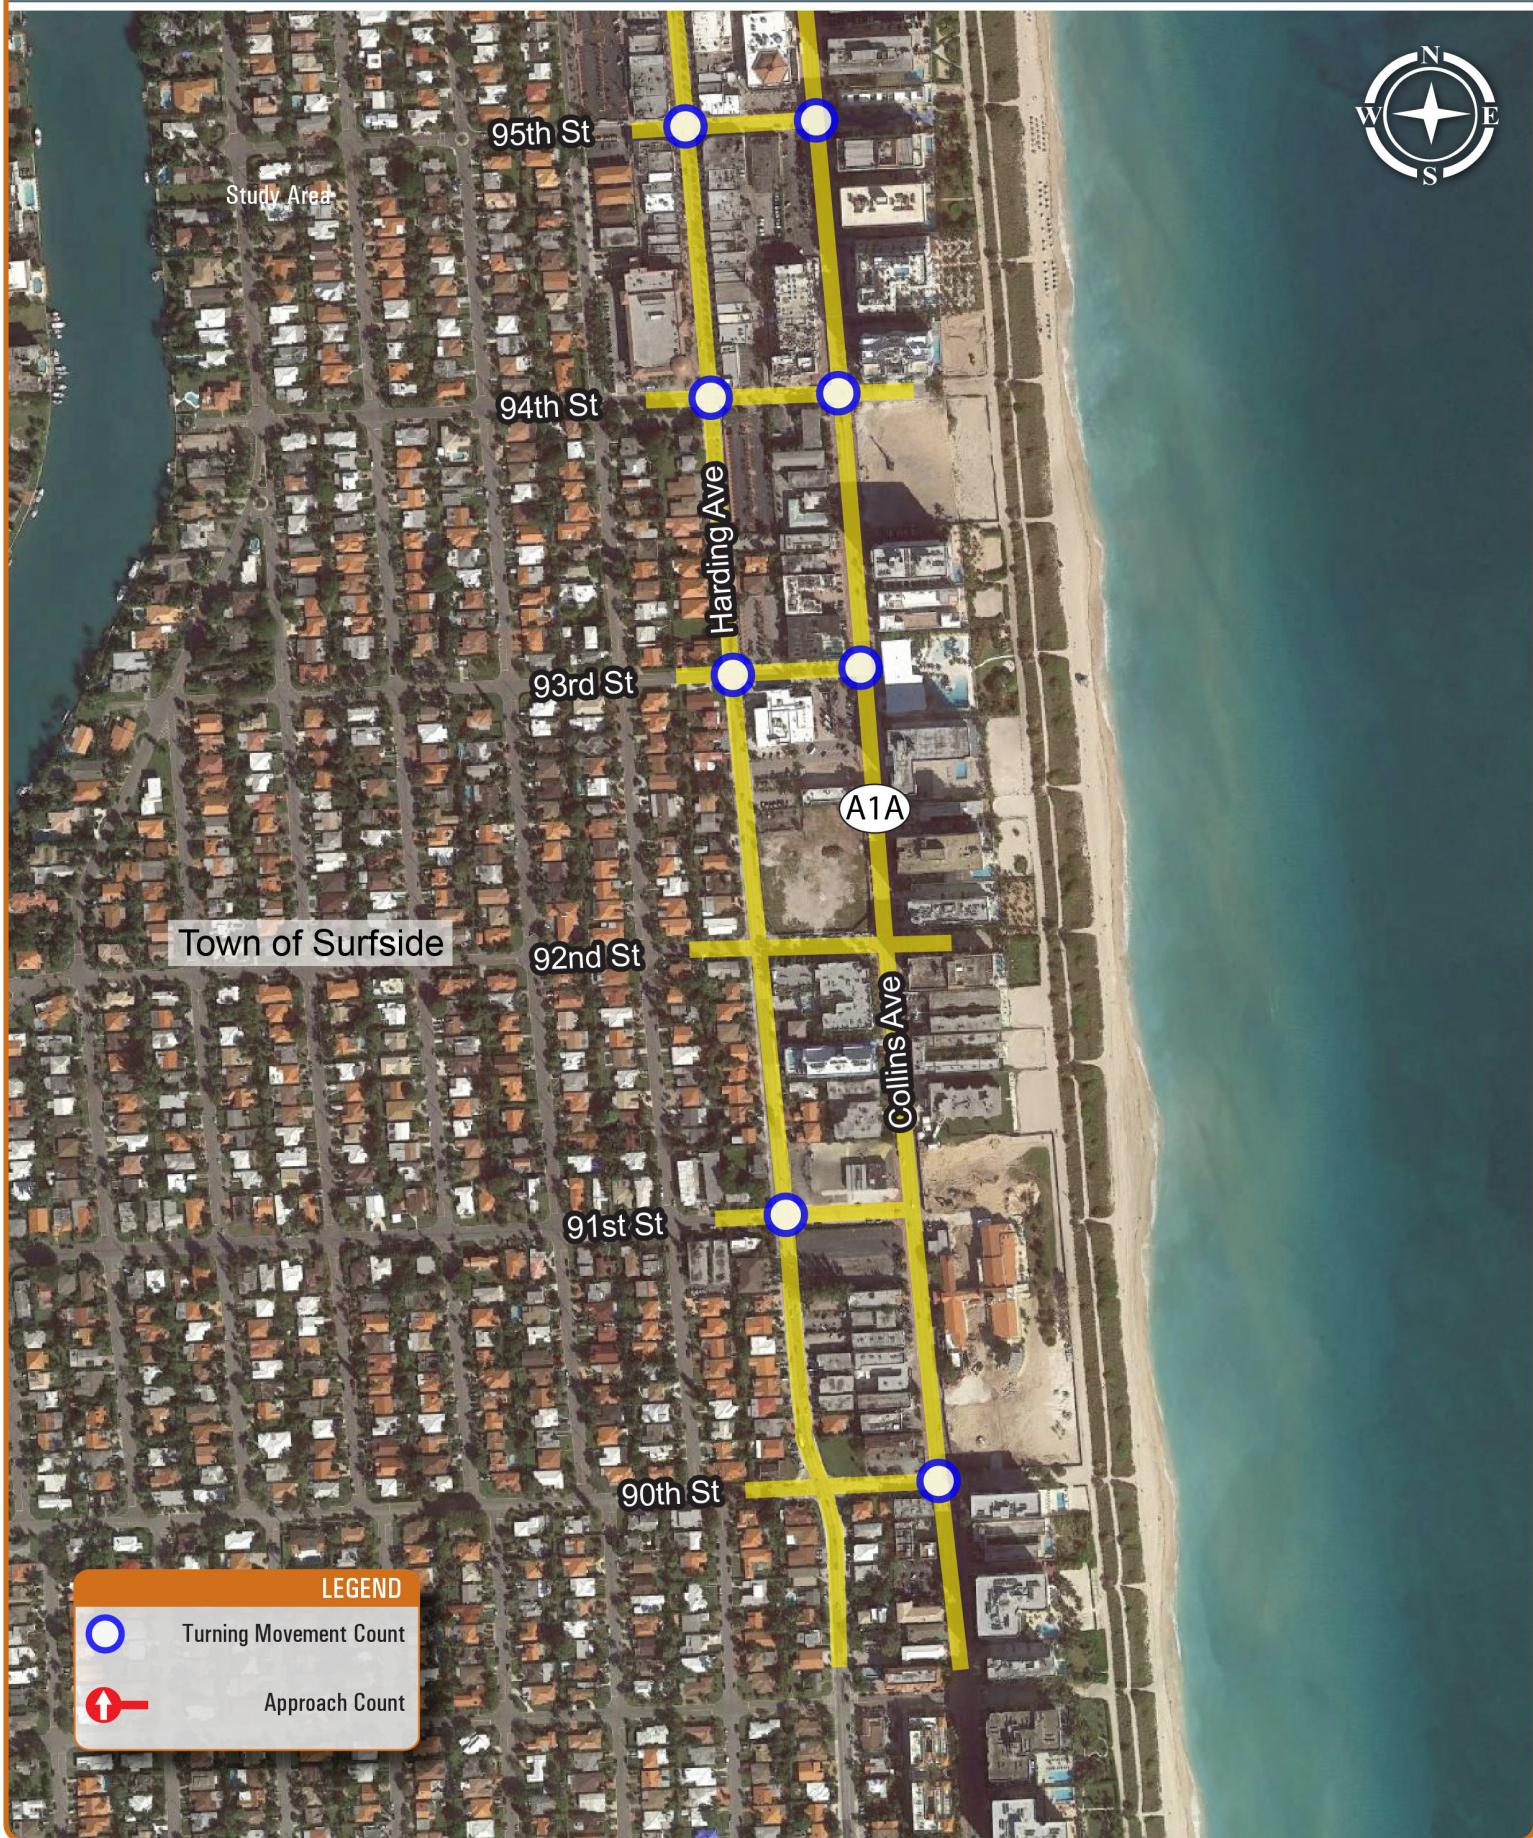

Figure 2-1 B

3.0 Traffic Analysis

The network of roads near the Bal Harbour Shops was modeled using Synchro 8, a macroscopic traffic modeling software. Roadway geometric characteristics, existing traffic signal timing parameters, and TMCs were input into the model. The existing Levels of Service (LOS) at each signalized intersection within the study area and along the Collins Avenue, Harding Avenue, and 96th Street corridors were estimated. Based on the review of existing traffic conditions from field reviews as well as the existing traffic analysis, new signal timing parameters were developed to improve traffic operations along the study corridors. The new signal timing parameters were also evaluated using a Synchro model. The two scenarios were compared in order to ensure that the new timing parameters will improve traffic flow. A third Synchro model was developed to demonstrate the benefits of implementing vehicle and pedestrian detection at some study intersections in Bal Harbour and Surfside that currently lack detection.

3.1 Existing Conditions

The study area consists of three road segments and 15 signalized intersections. Of the 15 intersections, five are pre-timed signals, nine are semi-actuated, and one is pedestrian actuation only. The intersection of Collins Avenue & Harding Avenue has only pedestrian actuation since the two one-way streets join to become a two-way street at this intersection and there are no conflicting vehicular movements. Intersections along Collins Avenue, Harding Avenue, and 96th Street are coordinated within the following corridors.

- Collins Avenue - from the 9700 Block to 93rd Street
- Harding Avenue - from 96th Street to 91st Street
- 96th Street - from the 500 Block to Collins Avenue.

The intersections of Collins Avenue & Harbour Way and Collins Avenue & 90th Street are isolated from the rest of the signals and are therefore not coordinated with them.

Five intersections currently operate without vehicle detection. These intersections operate under pre-timed conditions and do not have pedestrian detection (push buttons). With pre-timed conditions, vehicles on the major street may be stopped even if there are no vehicles or pedestrians on the minor street. This increases vehicle delay, travel time, and fuel consumption/emissions. Without pedestrian detection, every time a vehicular movement has a green indication, it is assumed that a pedestrian is crossing in the adjacent crosswalk and the green time must be sufficient to allow the pedestrian to cross safely. This further increases the required green time for the side street and thus the delay, travel time, and fuel consumption/emissions of vehicles on the main street. The five intersections without detection are:

- Harding Avenue & 96th Street
 - Harding Avenue & 95th Street
 - Collins Avenue & 95th Street
 - Harding Avenue & 94th Street
 - Harding Avenue & 93rd Street
-

The remaining intersections have detection on the minor streets and the left-turn lanes of the major street, if applicable.

The majority of the intersections within the study area operate with a cycle length of 160 seconds in the AM period and 150 seconds in both the PM period and during the weekend. There are three intersections, however, that operate with “half cycles” of 80 seconds in the AM period and 75 seconds in the PM period/during the weekend. Half cycles are used at intersections within a coordinated system that have lower side street volumes than the other intersections. They allow the side streets to be serviced more frequently while preserving progression along the major street. The three intersections that currently operate with a half cycle are located along Collins Avenue at 93rd Street, 94th Street, and 95th Street.

Table 3-1 shows the average travel time through the study area along Collins Avenue, Harding Avenue, and 96th Street as estimated by Synchro along with the travel times measured in the field. Table 3-2 summarizes the average delay and corresponding levels of service at each of the intersections for the AM, PM, and weekend peak periods. Detailed Synchro output sheets showing travel time between segments and delay for each approach and movement are included in Appendix C.

Table 3-1: Travel Times under Existing Conditions

| Road Segment | Dist. (mi) | Field Measured | | | Synchro | | | | | | |
|--------------------------------------|------------------------------------|----------------------------|------|------|----------------------------|------|------|------|----|------|---|
| | | Average Travel Time (m:ss) | | | Average Travel Time (m:ss) | | | LOS | | | |
| | | AM | PM | WKND | AM | PM | WKND | AM | PM | WKND | |
| Collins Ave Northbound | 90 th St to Harbour Way | 1.34 | 3:45 | 4:41 | 4:21 | 3:41 | 3:52 | 3:44 | C | C | C |
| Collins Ave & Harding Ave Southbound | Harbour Way to 91 st St | 1.20 | 3:01 | 3:27 | 3:14 | 3:45 | 3:31 | 3:22 | C | C | C |
| 96 th St Eastbound | 500 Blk to Collins Ave | 0.22 | 1:39 | 2:00 | 1:55 | 2:40 | 2:26 | 2:39 | F | F | F |
| 96 th St Westbound | Collins Ave to 500 Blk | 0.22 | 1:30 | 1:44 | 2:10 | 1:21 | 1:38 | 1:43 | E | E | E |

The travel times measured in the field were compared to the travel times estimated by Synchro in order to validate the model. The model’s travel times are within a suitable range compared to the field measured travel times. Therefore, no changes were made to the model.

Table 3-2: Intersection Delays under Existing Conditions

| Intersection | MDC Asset No. | Signal Delay (s) | | | LOS | | |
|-----------------------------------|---------------|------------------|------|------|-----|----|------|
| | | AM | PM | WKND | AM | PM | WKND |
| Collins Ave & Harbour Way | 3629 | 10.2 | 14.6 | 7.0 | B | B | B |
| Collins Ave & 9700 Blk | 3548 | 10.5 | 16.7 | 16.6 | B | B | B |
| Collins Ave & Harding Ave | 3006 | 1.1 | 0.7 | 0.6 | A | A | A |
| Collins Ave & 96 th St | 3005 | 24.2 | 14.0 | 19.4 | C | B | B |
| Harding Ave & 96 th St | 2919 | 55.7 | 31.9 | 23.9 | E | C | C |
| Collins Ave & 95 th St | 3319 | 4.7 | 10.8 | 8.9 | A | B | A |
| Harding Ave & 95 th St | 2918 | 6.9 | 14.1 | 13.4 | A | B | B |
| Collins Ave & 94 th St | 2912 | 7.0 | 2.9 | 7.6 | A | A | A |
| Harding Ave & 94 th St | 2917 | 9.8 | 9.3 | 10.3 | A | A | B |
| Collins Ave & 93 rd St | 2911 | 5.2 | 9.2 | 5.8 | A | A | A |
| Harding Ave & 93 rd St | 3185 | 4.7 | 4.8 | 3.9 | A | A | A |
| Harding Ave & 91 st St | 2916 | 2.6 | 2.6 | 2.4 | A | A | A |
| Collins Ave & 90 th St | 4231 | 6.8 | 5.9 | 5.1 | A | A | A |
| 96 th St & 500 Blk | 4344 | 5.2 | 11.1 | 8.4 | A | B | A |
| 96 th St & Byron Ave | 3648 | 12.6 | 8.3 | 7.2 | B | A | A |

As shown in Table 3-2, a majority of the intersections operate at an overall LOS of A or B with the exception of Harding Avenue & 96th Street and Collins Avenue & 96th Street.

3.2 Alternative 1: New Signal Timing Parameters

New traffic signal timing parameters were developed in order to mitigate the delay near the Bal Harbour shops. Changes to the timing parameters included increasing the green time for major movements at each intersection (north/south movements along Harding Avenue and Collins Avenue and east/west movements along 96th Street), converting two additional signals to half cycles, and increasing the cycle length during the PM peak period to 160 seconds. Offsets at each intersection were also adjusted in order to account for the other changes. The two signals that were converted to half cycles are located along Harding Avenue at 94th Street and 95th Street. Offsets at each intersection were also adjusted in order to accommodate the new signal timing parameters. Because the intersections of Collins Avenue & Harbour Way and Collins Avenue & 90th Street are isolated and not coordinated with the other signals, no changes were made to their timing parameters. Appendix D presents the new signal timing parameters.

Table 3-3 shows the average travel time through the study area along Collins Avenue, Harding Avenue, and 96th Street with the new timing parameters. **Error! Reference source not found.** summarizes the average delay at each of the intersections for the AM and PM peak periods with the new timing parameters. Detailed Synchro output sheets showing travel time between segments and delay for each approach and movement are included in Appendix C.

Table 3-3: Alternative 1 Travel Times

| Road Segment | | Dist. (mi) | Average Travel Time (m:ss) | | | LOS | | |
|--------------------------------------|------------------------------------|---------------|-------------------------------|------|------|-----|----|------|
| | | | AM | PM | WKND | AM | PM | WKND |
| Collins Ave Northbound | 90 th St to Harbour Way | 1.34 | 3:35 | 3:48 | 3:34 | C | C | C |
| Collins Ave & Harding Ave Southbound | Harbour Way to 91 st St | 1.20 | 3:40 | 3:23 | 3:18 | C | C | C |
| 96 th St Eastbound | 500 Blk to Collins Ave | 0.22 | 2:20 | 2:12 | 2:30 | F | F | F |
| 96 th St Westbound | Collins Ave to 500 Blk | 0.22 | 1:19 | 1:32 | 1:20 | E | E | E |

As shown in the previous tables, the overall travel time along each arterial in the study area decreases with the new signal timing parameters. Overall intersection delays also decrease at a majority of the intersections. At intersections where the overall intersection delay increases, it does so by less than one second. Also, the LOS for many approaches/movements that are operating at an LOS of E or F under existing conditions improve to an LOS of C or D with the proposed signal timing parameters under Alternative 1.

At four of the five intersections without vehicle or pedestrian detection, the green time for the side streets was reduced—the exception being the intersection of Harding Avenue & 96th Street. The reduction in green time at these locations ranged from three to nine seconds. This also reduced the pedestrian crossing times. These new times were verified to ensure that they give adequate crossing time to pedestrians. The total green time at all of these intersections is adequate; however, the “Steady Walk” time was reduced from seven seconds to four seconds at these locations in order to provide adequate pedestrian clearance (Flashing Don’t Walk) time. These changes are highlighted in Appendix D.

Table 3-4: Alternative 1 Intersection Delays

| Intersection | MDC Asset No. | Signal Delay (s) | | | LOS | | |
|-----------------------------------|------------------|------------------|------|------|-----|----|------|
| | | AM | PM | WKND | AM | PM | WKND |
| Collins Ave & Harbour Way | 3629 | 10.2 | 14.6 | 7.0 | B | B | B |
| Collins Ave & 9700 Blk | 3548 | 10.5 | 16.5 | 15.8 | B | B | B |
| Collins Ave & Harding Ave | 3006 | 0.6 | 0.9 | 0.5 | A | A | A |
| Collins Ave & 96 th St | 3005 | 19.4 | 11.9 | 16.0 | B | B | B |
| Harding Ave & 96 th St | 2919 | 55.6 | 27.7 | 18.7 | E | C | B |
| Collins Ave & 95 th St | 3319 | 2.7 | 7.7 | 6.6 | A | A | A |
| Harding Ave & 95 th St | 2918 | 5.4 | 8.1 | 7.0 | A | A | A |
| Collins Ave & 94 th St | 2912 | 4.9 | 3.6 | 5.2 | A | A | A |
| Harding Ave & 94 th St | 2917 | 4.4 | 5.1 | 6.2 | A | A | A |
| Collins Ave & 93 rd St | 2911 | 4.4 | 6.5 | 4.8 | A | A | A |
| Harding Ave & 93 rd St | 3185 | 3.0 | 4.6 | 3.9 | A | A | A |
| Harding Ave & 91 st St | 2916 | 2.5 | 2.7 | 2.2 | A | A | A |
| Collins Ave & 90 th St | 4231 | 6.8 | 5.9 | 5.1 | A | A | A |
| 96 th St & 500 Blk | 4344 | 5.0 | 9.1 | 7.2 | A | A | A |
| 96 th St & Byron Ave | 3648 | 12.2 | 7.4 | 7.0 | B | A | A |

3.3 Alternative 2: New Signal Timing Parameters and Vehicle Detection

Adjusting signal timing parameters is a short-term solution for reducing congestion in Bal Harbour and Surfside. The installation of vehicle and pedestrian detection will further reduce delay along Harding Avenue and Collins Avenue. Under pre-timed signals, vehicles on the major street are stopped even when there are no vehicles on the minor street. Furthermore, with pre-timed signals, it must be assumed that a pedestrian is crossing the street during every phase and adequate crossing time must be provided. With detection, the minor street is only given green time when vehicles or pedestrians are present and allows shorter green times if a pedestrian is not present. To show the benefit of adding vehicle detection at all intersections along this corridor, a third model was developed with vehicle detection on the minor streets at the following intersections:

- Harding Avenue & 96th Street
- Harding Avenue & 95th Street
- Collins Avenue & 95th Street
- Harding Avenue & 94th Street
- Harding Avenue & 93rd Street

Timing parameters from Alternative 1 were used, but offsets were adjusted to optimize vehicle progression. The vehicle extension time for each of these approaches was set to 2.5 seconds in order to be consistent with existing signals. Table 3-5 shows the average travel time through the study area along Collins Avenue, Harding Avenue, and 96th Street with vehicle detection. Table 3-6 summarizes the average delay at each of the intersections for the AM and PM peak periods. Detailed Synchro output sheets showing travel time between segments and delay for each approach and movement are included in Appendix C.

Table 3-5: Alternative 2 Travel Times

| Road Segment | Dist. (mi) | Average Travel Time (m:ss) | | | LOS | | | |
|---|------------------------------------|-------------------------------|------|------|------|----|------|---|
| | | AM | PM | WKND | AM | PM | WKND | |
| Collins Ave Northbound | 90 th St to Harbour Way | 1.34 | 3:34 | 3:42 | 3:30 | C | C | C |
| Collins Ave & Harding Ave Southbound | Harbour Way to 91 st St | 1.20 | 3:27 | 3:15 | 3:08 | C | C | C |
| 96 th St Eastbound | 500 Blk to Collins Ave | 0.22 | 2:30 | 2:18 | 2:41 | F | F | F |
| 96 th St Westbound | Collins Ave to 500 Blk | 0.22 | 1:23 | 1:33 | 1:32 | E | E | E |

Table 3-6: Alternative 2 Intersection Delays

| Intersection | MDC Asset No. | Signal Delay (s) | | | LOS | | |
|-----------------------------------|---------------|------------------|------|------|-----|----|------|
| | | AM | PM | WKND | AM | PM | WKND |
| Collins Ave & Harbour Way | 3629 | 10.2 | 14.6 | 7.0 | B | B | B |
| Collins Ave & 9700 Blk | 3548 | 10.5 | 15.1 | 15.5 | B | B | B |
| Collins Ave & Harding Ave | 3006 | 0.6 | 0.7 | 0.6 | A | A | A |
| Collins Ave & 96 th St | 3005 | 17.2 | 12.6 | 14.2 | B | B | B |
| Harding Ave & 96 th St | 2919 | 45.0 | 29.9 | 22.9 | D | C | C |
| Collins Ave & 95 th St | 3319 | 3.2 | 3.8 | 3.8 | A | A | A |
| Harding Ave & 95 th St | 2918 | 5.7 | 8.6 | 7.8 | A | A | A |
| Collins Ave & 94 th St | 2912 | 4.5 | 3.6 | 4.7 | A | A | A |
| Harding Ave & 94 th St | 2917 | 4.4 | 5.1 | 5.1 | A | A | A |
| Collins Ave & 93 rd St | 2911 | 4.3 | 6.4 | 4.9 | A | A | A |
| Harding Ave & 93 rd St | 3185 | 2.6 | 2.8 | 2.8 | A | A | A |
| Harding Ave & 91 st St | 2916 | 2.7 | 2.8 | 2.3 | A | A | A |
| Collins Ave & 90 th St | 4231 | 6.8 | 5.9 | 5.1 | A | A | A |
| 96 th St & 500 Blk | 4344 | 2.8 | 9.0 | 7.3 | A | A | A |
| 96 th St & Byron Ave | 3648 | 12.9 | 7.6 | 6.4 | B | A | A |

The largest improvement with vehicle detection can be seen at the intersection of Harding Avenue & 96th Street during the AM peak period. The overall intersection delay decreases by 10.6 seconds and the LOS improves from E to D. The overall delay increases at this intersection during the PM peak period under Alternative 2. However, it should be noted that the southbound approach delay decreases by 3.4 seconds per vehicle and the intersection delay is lower than the delay under existing conditions. Delay at all intersections is reduced during the Weekend peak period.

4.0 Conclusions and Recommendations

As seen in Section 3.0, adjusting signal timing parameters will reduce the travel time and intersection delay throughout the study area and the installation of vehicle detection will further improve travel times along the study corridors. Table 4-1 shows the change in travel time for each alternative when compared to the existing conditions.

Table 4-2 shows the change in the overall intersection delay for each alternative when compared to the existing conditions.

It is recommended that, upon approval from Miami-Dade County's Traffic Signals and Signs Division (TS&S), the new signal timing changes developed in Alternative 1 and summarized in Appendix D be implemented. The new signal timing parameters may need to be fine-tuned in response to real world traffic patterns after initial implementation. Although Synchro can model traffic patterns and estimate the outcome of signal timing changes, the real-world outcomes may be different.

As a long-term solution, it is recommended that vehicle and pedestrian detection be installed at intersections that do not already have it, in order to further improve traffic in this area. Vehicle detection will especially improve operations at the intersection of Harding Avenue & 96th Street in the AM period.

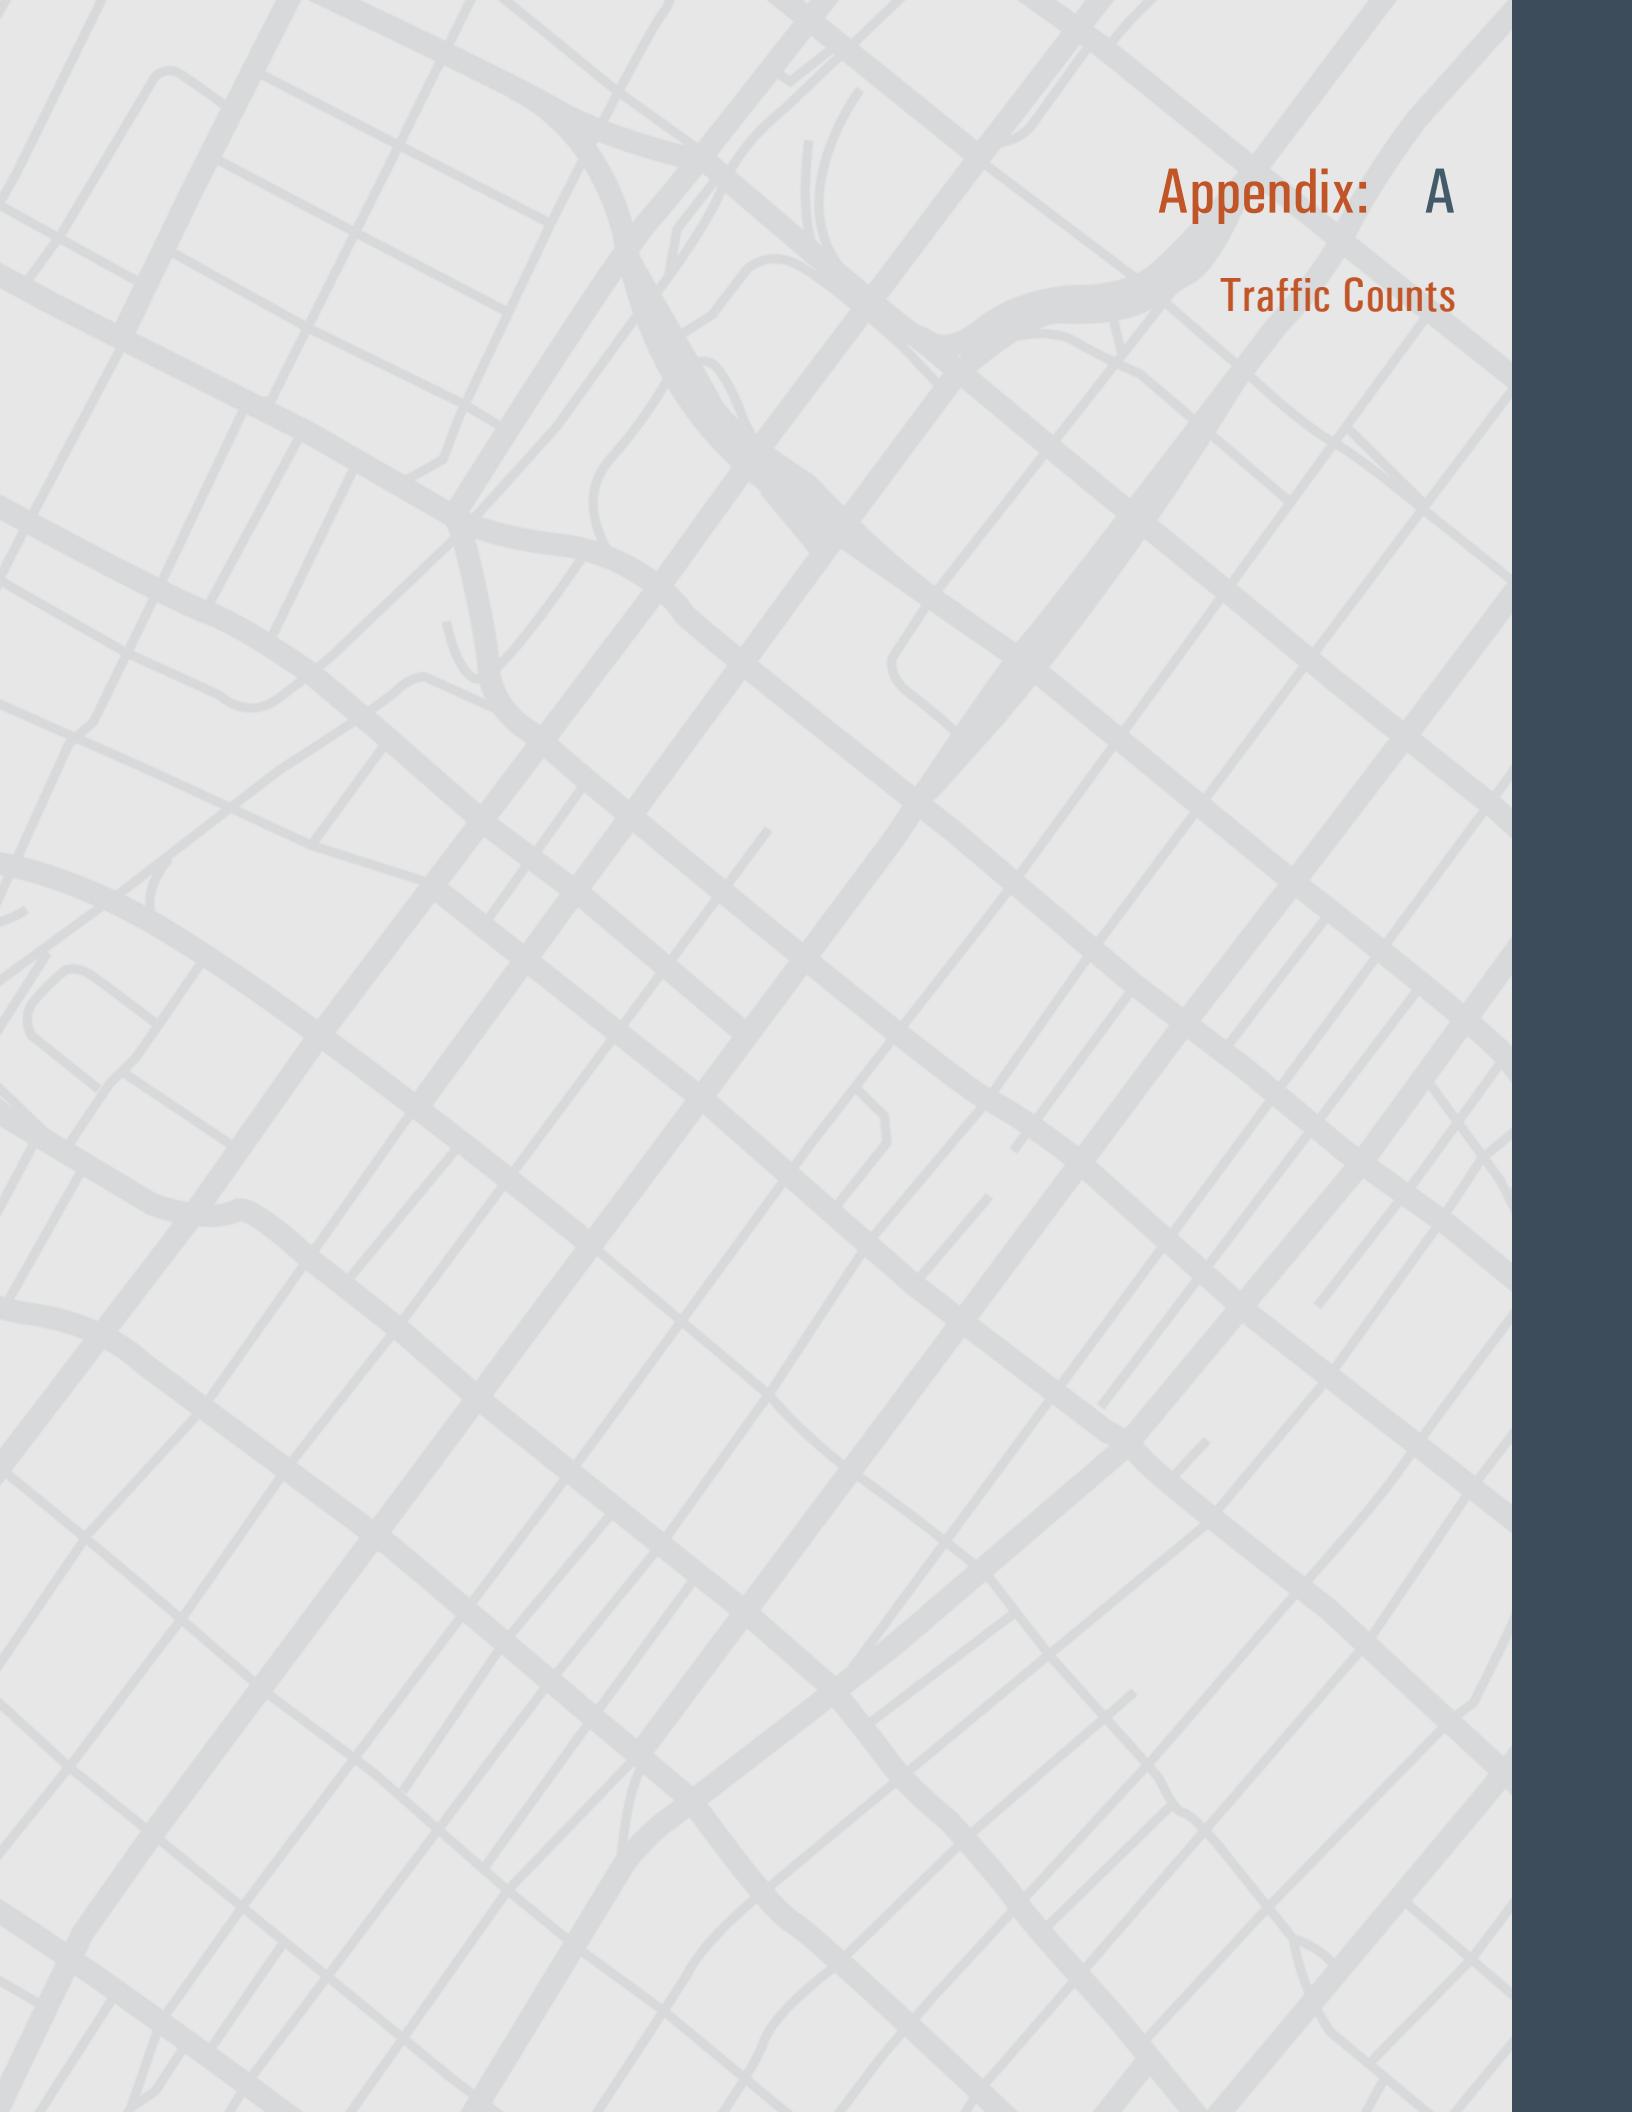

Table 4-1: Change in Travel Times for Each Alternative

A faint, light gray watermark-style map of a city's street network serves as the background for the page. The map shows a dense grid of streets with various intersections and some curved roads, all rendered in a very light gray shade.

Intersection Summary

Area Type: Other

Cycle Length: 80

Actuated Cycle Length: 80

Offset: 24 (30%), Referenced to phase 6:NBT, Start of Yellow

Natural Cycle: 45

Control Type: Pretimed

Maximum v/c Ratio: 0.46

Intersection Signal Delay: 2.7

Intersection LOS: A

Intersection Capacity Utilization 49.1%

ICU Level of Service A

Analysis Period (min) 15

Splits and Phases: 25: Collins Ave & 95th St

Lanes, Volumes, Timings
28: Harding Ave & 94th St

8/18/2014

Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 60 (38%), Referenced to phase 2:WBT and 6:EBTL, Start of Yellow

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.40

Intersection Signal Delay: 9.1

Intersection LOS: A

Intersection Capacity Utilization 49.5%

ICU Level of Service A

Analysis Period (min) 15

Splits and Phases: 21: 96th St & 500 Blk

Lanes, Volumes, Timings
24: Harding Ave & 95th St
